

## ENVIRONMENTAL ENGINEERING ELECTIVES

\*Updated 12.8.23

**READ THIS FIRST!** Things to know as you explore which electives you might take:

- Definition of an engineering elective: Any elective that includes engineering design elements in the course and has been approved by the Undergraduate Curriculum Committee as an engineering elective. Do not assume that any engineering course is an engineering elective.
- Definition of a technical elective: Math, science, or engineering courses that are approved by the Undergraduate Curriculum Committee as a technical elective. All engineering electives are also included on the technical elective list.
- Courses in **bold** don't require any requisites beyond the courses already in your Degree Plan. Courses in *italics* require prerequisites that you may not have, unless you have a double major or minor in that area. This means that **most students should stick to exploring the courses that are in bold**, not in italics. Please keep in mind that this is just a guide, and you should check the course catalog for the most up to date requisites for each course.
- Courses in **red** are recently approved as electives and haven't yet been added to the Advisement Report system. You can still enroll in these courses; you just need to make sure to contact your advisor so they can manually add the course into your report.
- The superscripts can be useful for some students. An <sup>o</sup> indicates that the course is sometimes offered online, <sup>s</sup> denotes that the course may be offered in the summer, <sup>g</sup> means that the course can double dip as a General Education course, and <sup>n</sup> indicates that Advanced Standing is not required for the course (Freshman and Sophomores can take these). Note also that **only one** lower-level Gen Ed course can double dip as a Technical Elective; these courses are designated with a \*.
- To figure out which electives you might enjoy, go to the catalog (<https://catalog.arizona.edu/>), choose the **courses** drop down (top left), then select **course descriptions**. From here, you can **choose the first letter** for the subject you are interested in and view all the courses offered in that department. Next, read the description, see when it is normally offered, and what the requisites are.
- Keep in mind that many courses can **double dip** with a minor. There are a few minors that you can complete entirely (or nearly entirely) just by double dipping your electives with the minor. Check out the **D2L** to explore the most popular minors our students take.
- Still stuck? Ask friends and classmates which electives they enjoyed and found manageable.
- If you find a course that is not on the list, but you think should be on the list, contact your advisor and we'll send it to the Undergraduate Curriculum Committee for review.
