590902ChEE 201 Elements of Chemical Engineering I Fall 2017 University of Arizona

Instructors: Dr. Paul Blowers Office Hours: To Be Determined 128 Harshbarger Email: blowers@email.arizona.edu Ph: 520-626-5319

Active Learning Environment: MWF 1:00 – 1:50 pm Gittings 201

Office Hours:

T 3-4 pm	Eva-Lou	Third Floor of Science Library
R 12-1 pm	Alyssa Th	nird Floor of Science Library
R 3-4 pm	Paul	Third Floor of Science Library

Supplemental Hours: vary

Students are required to enroll in one of the supplemental hour sessions and to attend each week. Credit will be given for preparing for the supplemental hour of active instruction for attempting the problems and being ready to work on them.

Undergraduate Preceptors:

Sulaiman Bakadam Ben Barnett Eva-Lou Edwards Taylor Hunter Alejandra Fraijo Arce – Attendance preceptor (jfraijoarce@email.arizona.edu) Alyssa Gutierrez Austin Reed – Learning Researcher Brooke Weber Mikas Zappia

Course Description:

This course will introduce you to the fundamental principles of chemical process analysis. It will equip you with problem solving techniques and will give you experience in the application of these techniques to a wide variety of process-related problems. This course will also begin demonstrating how mathematics and spreadsheets can be a fundamental tool for solving complex engineering problems.

Text:Elementary Principles of Chemical Processes, 4th Edition, Special Printing
R. M. Felder and R. W. Rousseau, John Wiley and Sons, 1998 or 2005.

This textbook is available digitally via D2L through the Inclusive Access program. Please access the material through D2L immediately to make sure there are no issues in the delivery, and if you are having a problem or question it can be addressed quickly.

You automatically have access to the course materials FREE through September 4, 2017. You must take action (even if you haven't accessed the materials) to opt-out if you do not wish to pay for the materials, and choose to source the content independently. The deadline to opt-out for courses beginning August 21st is 9:00pm, Monday September 4, 2017.

Please refer to the Inclusive Access FAQs at shop.arizona.edu/inclusive for additional information.

Getting Help Outside of Class and Out of Office Hours:

Students will be helping each other after hours using the piazza discussion boards that have been set up. You can join them either through course orientation or by going to

https://d21.arizona.edu/d21/le/content/590905/viewContent/5200595/View You should check these discussion threads when you have a question as someone may have posted a hint or asked a question that you also have and someone may have posted an answer. *The preceptors will be responding, as will the instructor if student peer answers are not clear. Extra credit can be earned as described later in the syllabus.*

Course Objectives:

Upon completion of this course, students should be able to:

- 1) use unit conversions while solving problems
- 2) transfer a verbal problem statement into a mathematical form
- 3) write and solve mass balances for a process
- 4) identify what phase a substance is in and then be able to relate volume to mass and moles
- 5) use diagrams and tables to obtain information needed to solve problems
- 6) apply Raoult's law when solving mass balances
- 7) identify and use different energy terms to solve energy balances
- 8) integrate material and energy balances to solve complex problems
- 9) set up and solve problems where variables are changing with time

Other metaconcepts the students should be proficient at:

1) be able to identify personal difficulties during problem solving and to take corrective action

2) be able to knowledgeably think of everyday examples where material and energy balances are important

3) be able to conceptually link levels of information and ideas in a problem solving framework

4) begin to use the library and electronic resources effectively to find high quality information

Course Prerequisites:

The courses you must have taken before this course are:

MATH 124 or MATH 125; CHEM 151, CHEM 152, ENGR 102. You should have also completed ECE 175 or AME 105 and be concurrently in AME 205. If you have not fulfilled the co- or prerequisite courses you may be dropped from the course at the instructor's discretion since you may not succeed based on past student performance.

If the class becomes too large for the classroom it is scheduled in, students who do not meet the 2.0 U of A GPA may be dropped from the course. 2.0 is the minimum GPA to be a student at U of A.

Course Website: D2L website for ChEE 201

Important Dates to Keep in Mind:

8-28: Last day to use UAccess for adding classes, changing section, or changing to/from pass/fail grade

8-29: Late drop fee of \$25.00/class starts.

Change of Schedule form is needed with instructor's signature to drop or add a class.

- 9-4: Last day to drop without a W.
- 9-17: Last day to file for Grade Replacement Option.

10-13: Last day to drop the class, requiring both the instructor's signature and the dean's signature

Course Grading Policies:

This section details the graded elements of the class, first in a big picture way and then in detail. Big Picture View of Graded Elements

Individual HW	due daily	15%
Group HW	due weekly	5%
Pre-Class Quizzes	due daily	10%
Attendance	due daily	10%
Midterm Exams	four times/sem	42%
Final Exam	end of semester	18%
Total	1	00%

Teamwork is required in all engineering jobs and we will start building your skills in this area by working in teams inside and outside of class. You should help your classmates master content even as you ask questions of them when you are stuck. To help your team, make sure you attend class, do the pre-quizzes, and work with them. You will find that the group homework will not be solveable by one person so certainly work with your team on those activities.

Homework: (15 % of grade for individual problems + 5% for group team problems)

Individual homework is due at the <u>beginning</u> of the class on the day it is due to the dropbox for that day. Late homework will not be accepted. A clear scan, picture from your device, or other clear materials will be acceptable. Each week, one problem will be graded for detail and will make up the bulk of the points for the individual homework grade, while the other problems will be assessed for completion and be worth 10% each for making a good attempt. The problem graded in detail will be selected at random from the week's set of cumulative problems.

Group HW will be due once a week and will typically be the one or two toughest problems from each set of concepts will be due each week and is a group mastery problem that you will solve together in your learning teams. Your team should submit only one single copy to a team member's dropbox before class on the day that set is due. These problems will be graded for detail.

To eliminate confusion and difficulties in staying current, students will have 1 week from the date homework, quizzes, or exams are returned to discuss grading criteria and scores with the instructor or regrader. After the 1 week time limit has passed, students will not be able to petition for changes to their grade.

Pre-class Quizzes on D2L: (10 % of grade)

There are many elements of being ready for new topics and part of that is to do the class readings ahead of time so you are ready for what happens in class. The online quizzes developed to help you be ready for class will make up 10 % of the grade and you will have three attempts on each quiz and your highest score will be the one recorded. These quizzes are designed so students will know the most important details from each reading section. If you want to efficiently study, open the quiz and start reading, looking for the details the questions ask you to notice, and take notes on the details. You'll quickly find out that the quizzes are randomized and if you are unhappy with your score and retake, that you get a new

set of questions that cover the same content in a slightly different way. You'll be faster if you take the quiz seriously the first time.

Attendance (10% of grade)

An active learning environment involves everyone working together to help master the content. Points will be assigned for attendance for each lecture based on use of your clicker/responseware during class, but up to two missed days will be dropped for each student. If you were present on a day in class and did not have your clicker, email a scan of your notes to that day to the attendance preceptor, clearly telling them which lecture number the notes are for and which date.

All holidays or special events observed by organized religions will be honored for those students who show affiliation with that particular religion; the Panopto recording will need to be watched and the attendance preceptor emailed to earn the credit. The complete list of UA approved holidays is available at: <u>http://registrar.arizona.edu/calendar-religious-holidays</u>

Absences pre-approved by the UA Dean of Students are also honored, but the Panopto recording will need to be watched and the attendance preceptor emailed to earn the credit.

Exams (six exams, 7 % each, 42 % of grade total).

These in-class exams are **comprehensive** and are scheduled on later pages. Unless otherwise announced, these exams will be open book. Don't get too excited about this fact since you will need to know how to problem solve. On each exam, you will be ask to submit a concept map that you have built with your team and added to as the weeks pass. You can use your team generated concept map on your exam and will submit a copy with your exam for 5 points towards the exam.

Make-up exams: There will be no make up exams. If a student has a valid medical or emergency excuse, the missed exam grade will be replaced by the average of the other midterm grades.

Final exam: (18 % of grade).

Comprehensive final on Monday December 11, 1 pm to 3:00 pm. A comprehensive final will be given during the scheduled period during finals.

Extra credit: (up to 1 % increase in final grade)

Students who answer other students' questions posted to the piazza discussion board can earn up to 1% extra credit towards their final course grade, at the discretion of the instructor.

Possibility of Dropping some Scores Based on Class TCE Response Rates:

If 80% of the class completes the Teacher Course Evaluation at the end of the semester, then the lowest two pre-quiz D2L grades will be dropped for every student in the class. If 90% of the class completes the Teacher Course Evaluation at the end of the semester, then the lowest individual HW score will be dropped.

Plagiarism: Although this course is not writing intensive, plagiarism is unacceptable. The plagiarism policies within the Student Code of Academic Integrity will be strictly followed: http://doc.web.arizona.edu/uapolicies.

Threatening Behavior: The general policies against threatening behavior by students will be followed: <u>http://policy.web.arizona.edu/~policy/threaten.shtml</u>

Inclusivity: This course supports elective gender pronoun use and self-identification; rosters indicating such choices will be updated throughout the semester, upon student request. As the course includes group work and in-class discussion, it is vitally important for us to create an educational environment of inclusion and mutual respect

Grading Rubric:

Letter grades on exams or assignments will not be determined; a final letter grade will be given at the end of the semester instead. This course will be graded on a straight scale as follows:

Total percentage of points earned	Final Grade
90 - 100 %	А
78 – 89.999 %	В
66 – 77.999 %	С
54 – 65.999 %	D
< 54.999%	E

Course Lectures and Attendance Policies:

Telephones/electronic devices, or other communication technologies are strongly discouraged unless used for legitimate learning purposes, like finding information to solve a problem assigned in class. Students who disrupt class or learning activities will be asked to leave the classroom.

Participation for i-Course Students:

Like the in class version, participation with the online content is critical for student success for students in the i-Course. Students who do not work through recorded content within 48 hours of the lecture may be administratively dropped.

Accessibility and Accommodations: It is the University's goal that learning experiences be as accessible as possible. If you anticipate or experience physical or academic barriers based on disability, please let me know immediately so that we can discuss options. You are also welcome to contact Disability Resources (520-621-3268) to establish reasonable accommodations

SALT Center and Disabililty Resource Center: Students who are able to use the services of the Strategic Alternatives Technology Center or may have other educational needs may see the professor at any time to discuss accommodations for their needs. However, this should be done at least 1 week prior to the first exam to allow for preparations that may be needed. Students who are registered with the Disability Resource Center must submit appropriate documentation to the instructor if they are requesting reasonable accommodations: http://drc.arizona.edu/teach/syllabus-statement.html.

Student Success in This Course

Students who succeed in this class, i.e., those who earn grades of A or B, typically are serious students who follow the Arizona Board of Regents policy of studying three hours for every in class hour. This means that you should expect to spend 9-10 hours of outside time on this class each week, consistently, throughout the semester. This means:

1) Students should attend class for all scheduled lecture periods and get notes from classmates when they are unable to attend.

2) Students will often be referring to the book during class so you should make sure you have an electronic or bound version of the book in class.

3) Students should come to class prepared to participate in active learning methods that encourage them to explore and question the material they are learning. This means that students should not expect any time during class for other activities like text messaging, telephone calls, other courses, or activities not part of the class. An active learning environment like the one used in the class maximizes exposure to problem solving techniques and mastery of the information.

4) Students should do their homework in a timely manner. Most homework assignments will be covered in class approximately three to five days in advance of when they are due. This leaves students ample time to reflect on the examples in class, come to office hours, and submit complete and correct homework

solutions. Students should begin working on their solutions as soon as the topics are covered in the active learning lectures so they have time to reach the correct answer.

Standards for Homework Problems and Quizzes:

1. Briefly restate the problem using a sketch or diagram where appropriate. Label the sketch or diagram with all quantities involved.

2. Indicate the basis you select, and indicate any change of basis within the problem. State assumptions.

3. Include both the numerical value and units for all quantities involved, including intermediate results.

4. Answers should be circled or otherwise marked, and reported to an appropriate number of significant digits.

5. Values obtained from a handbook or other reference should be accompanied by a citation. For example:

CCl₄ boiling pt. 76.5 °C (CRC, pg C-373)

6. Show how you have checked your work if appropriate.

7. Be clear and concise when writing answers to questions.

Substandard work will result in a loss of credit.

Required Extracurricular Activities: none

Special Materials Required for the Class: See online course content.

Changes to the Syllabus: The information contained in the course syllabus, other than the grade and absence policies may be subject to change with reasonable advanced notice as deemed appropriate by the instructor.
